# cronetwork monitoring

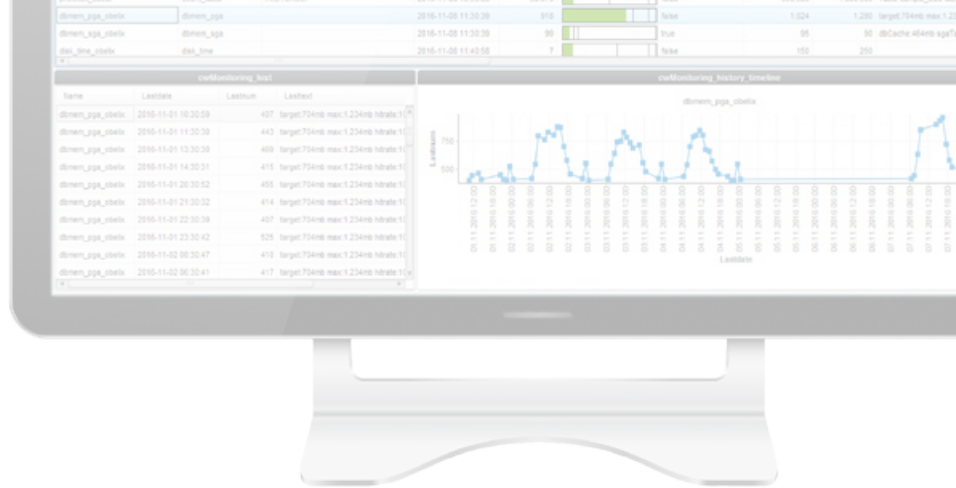

Maintain an overview of  
your MES productivity

IT systems are firmly established in the value-added chains of today's producing enterprises. Their stable and faultless operation is an important success factor. However, perfect performance depends not only on the stability of an application but also on external infrastructure factors.

cronetwork monitoring lets you keep an eye on these factors and react early to any occurring problems or bottlenecks. Further, you receive valuable data that support you in optimizing your system performance. You can decide whether you will use cronetwork monitoring as an integrated component of MES or feed the data to an existing monitoring tool.

## :: Overview of performance

Always keep a watch over the performance of your servers, databases and applications.

## :: Incorporation into existing monitoring service

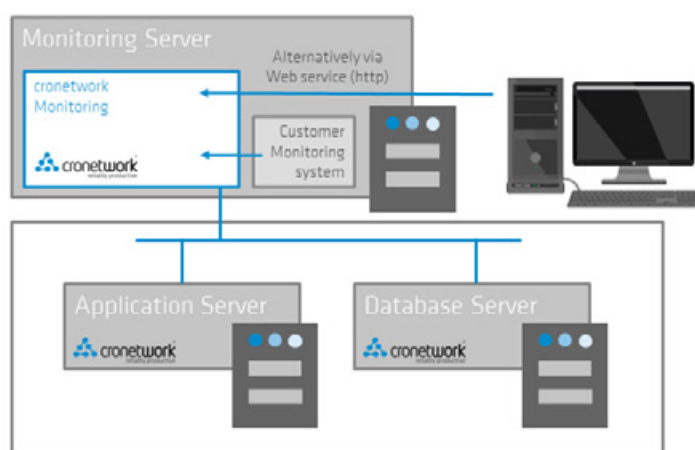

You can also incorporate the monitoring data into an existing monitoring solution.

## :: Configurable early warning system

Situation-related warnings go beyond the standard; configurable by application and case.

## :: Predefined sensors

These can be customized to meet your needs.

You can integrate cronetwork monitoring in various ways into your existing system landscape
