APS plus (Order Network Formation)

advanced

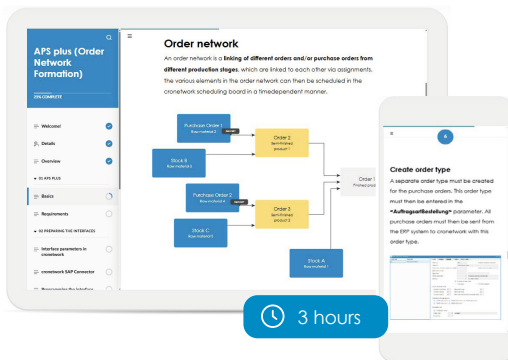

Book here!

In modern production environments, APS and order network formation play a crucial role in efficient production control. This course provides you with an overview of the functions of APS plus (Order network formation) in cronetwork.

Topics covered in this course include ...

- Definition and advantages
- Requirements for APS plus (Order network formation)
- Preparation and programming of interfaces
- Order network formation process in cronetwork
- Planning with APS plus (Order network formation)

Order network
An order network is a **linking of different orders and/or purchase orders from different production stages**, which are linked to each other via assignments. The various elements in the order network can then be scheduled in the cronetwork scheduling board in a **interdependent manner**.

Create order type
A separate order type must be created for this purchase order. The order type must then be processed in the **"Auftragsfertigung"** parameter. All purchase orders must then be sent from the ERP system to cronetwork with this order type.

3 hours

Target group
cronetwork key users and those who work with the scheduling board on a daily basis

Prerequisite
"Scheduling Board :: Basic", "Connectors :: Basic" or comparable basic knowledge

eLearning

-  Interactive learning
-  Didactic structure (theory, practice and reflection)
-  Varied design of multimedia content
-  Practical focus through system videos
-  Accessible 365 days a year
-  Certification
-  Time and location independent
-  Multilingualism (GER, EN)
