# Digital production of tomorrow— yours today!

cronetwork MES and the 360° manufacturing platform cronetworld empower a new form of transparency in your production and provide the basis for further optimization measures – while taking into account the entire value-added chain.

You plan realistically, save resources, act more flexibly, meet delivery deadlines, reduce inventories, and decrease risks and costs.

The MES becomes the data hub between the shop floor and the ERP system, from which your entire company profits: from management, controlling and quality management, to production planning, and down to the individual production worker. MES supports you in efficient planning of all production orders.

cronetwork®

- Your trusted partner for **MES & digitalization**
- Core expertise in manufacturing execution for **+35 years**
- Customizable, release-safe **standard software**
- **Satisfied customers,** from SMEs to multinational corporations
- **Consultancy expertise** for guaranteed project success

Industrie Informatik

Industrie Informatik

# Smart factory software at a glance

- Production Control
- Order & Data Management
- Quality Management
- Material Management
- Operating Resource Management
- Information Management
- Integration & Interoperability
- Personnel Management
- Predictive Analytics
- Optimizer
- Low-Code/No-Code

**From MES to manufacturing platform cronetworld**

cronetwork MES provides a clear picture of your scheduled production: What orders need to be completed in the near future? What capacities are available? Which delivery dates can be met? In the same way, an MES visualizes your current production processes, e.g.: machine status, order status and progress, and current order-related personnel and machine allocation. Furthermore, an MES enables systematic evaluation and analysis of the collected data, so that you have a focused foundation for your process control. The modular structure allows you both a step-by-step implementation and a holistic, customized digitalization project with simple expansion options to create the 360° degree production platform cronetworld.

cronetworld makes it possible to integrate MES services and selected best-of-breed solutions into your system landscape using modern communication technologies and to implement customized solutions in an agile and release-safe manner. You receive a centralized view of production-relevant, cross-system data and benefit from flexible, user-oriented information provision and process design on the way to the smart factory.

**Solution Store - online shopping in the smart factory**

The Solution Store enables you to implement new functions quickly and independently with ready-made, tried-and-tested and customizable “solutions“. With just a few clicks, you can raise your production to a new level of efficiency during ongoing operations!
